DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group I, claims 1-17, 32-34 and 36-39 in the reply filed on 02 March 2005 is acknowledged. Claims 18-31, 33 and 35 are withdrawn as being drawn to nonelected inventions.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-14, 32, 34 and 36-39 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims recite a product made by a process and it is unclear whether these processes provide product limitations that further limit the product of claim 1. Claims 2-14, 32, 34 and 36-39 do not appear to provide product limitations that further limit the product of claim 1. Therefore prior art teaching the receptor chip of claim 1 would comprise the product limitations of claims 2-14, 32, 34 and 36-39 and would encompass the product of the claims.

Claim 17 is drawn to a receptor chip that is adapted for detection using a particular method, but it is unclear how the adaptation affects the product structure of claim 1. It is unclear whether the adaptation for a specific detection method requires any further product limitations.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1641

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-17, 32, 34 and 36-39 are rejected under 35 U.S.C. 102(e) as being anticipated by Au-Young et al. (US 6,500,938).

Au-Young et al. teach a receptor chip (col. 7, lines 19-23), on which a recombinantly expressed biotinylated receptor protein of LOX-1, which is a scavenger receptor (the instant specification teaches LOX-1 being a Human lectin-like oxidized LDL receptor, which is SEQ ID NO 804) is immobilized via a factor capable of specifically binding to biotin (col. 7, lines 58-61; col. 8, lines 29-41). Although claim 17 does not recite any specific product limitations, Au-Young et al. also teach incorporation of mass spectrometry tags (col. 8, line 66-col. 9, line 10), which would adapt the chip for detection by mass spectrometry.

Regarding the limitations of claims 2-14, 32, 34 and 36-39, these claims recite a product formed by a process, and do not provide specific product limitations for the receptor chip. Therefore Au-Young et al. teaches the product limitations for the claims by teaching claim 1.
